

Web Console Overview

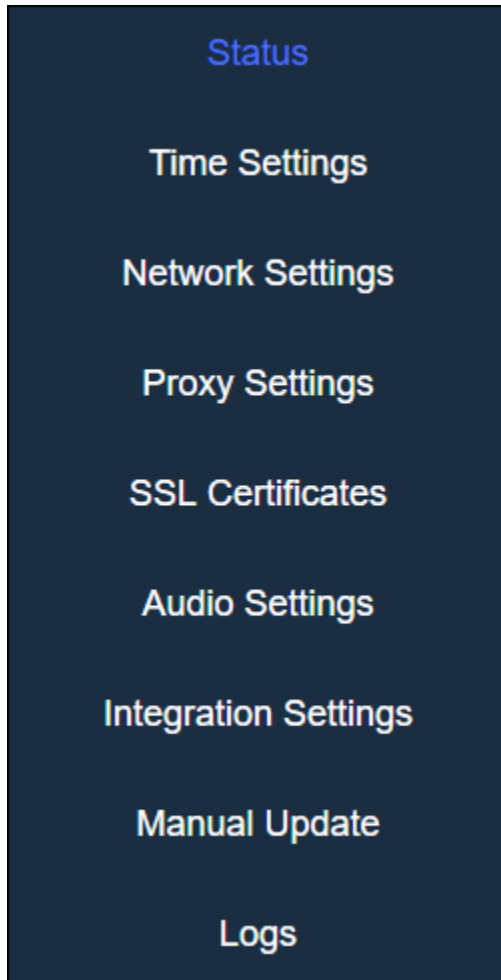

The Web Console is a simple administrative website where configuration updates to a Vivi Box can be made.

It also provides a snapshot of the status of the Box and allows some basic administrative tasks to be performed such as restarting the Box and sending log files to Vivi Support.

This is like the web-based administration pages that come with most routers.

Each Box has its own version of the Web Console installed on it.

The Web Console has a simple menu on the left of screen that links to the different types of configuration and admin tasks that are available.
